Naga Limited

Project Details:

Project #2

Project Name	: Salesforce Automation
Client	: Naga Limited Foods Division
Database/Environment	: React, Laravel, MYSQL & React Native (Mobile App).
Link	: www.digipro.nagamills.com

Project Description:

The Salesforce Automation (SFA) application, branded as "DigiPro", developed for Naga Limited's Foods Division to streamline and digitize their sales process. The system is designed to empower the sales team by enabling them to track, manage, and follow up on prospects and clients in real-time through both web and mobile platforms. The application facilitates end-to-end sales activities – from sales order taking and Inquiry generation and travel claim with SAP interface. The mobile app allows field sales agents to efficiently manage their tasks while on the move, whereas the web dashboard gives managers powerful oversight and reporting capabilities.

Key Features:

- **Permanent Journey Plan (PJP):**
 - Define and assign **monthly/weekly PJP** (Permanent Journey Plan) for each field employee.
 - Includes **planned customer visits**, target locations, and expected activities.
 - System validates field attendance and visits against the assigned PJP.
 - Missed visits and deviations are highlighted with reasons and can trigger alerts.
- **Field Visit & Order Reporting:**
 - Track daily field visits with geo-coordinates and customer-wise interaction details.
 - Generate **team-wise visit summary reports**, customer feedback logs, and activity performance.
 - Consolidated **order reports per team** including volumes, value, SKU mix, and gap against targets.
 - Filter by **employee, territory, division, date, or customer** for customized insights.
- **Travel Plan & Deviation Workflow:**
 - Submit and approve travel plans dynamically based on organizational hierarchy.
 - Capture deviations in real-time with remarks and supervisor approvals.
- **Attendance Management:**
 - Location-based attendance logging through mobile app with time and distance verification.
- **Expense & Claim Module:**
 - Claim travel, lodging, and miscellaneous expenses with attachments.
 - Integrated approval chain and rejection feedback.
- **Order Collection:**
 - Take primary/secondary orders with product, pricing, and scheme validation.
 - Syncs to SAP or backend ERP for instant processing.
- **Customer Onboarding:**
 - Digitized form, documents, geo-verification, and multi-level approval process.
- **SAP Integration:**
 - Auto-pull customer ledger and payment details.
 - Push orders and inquiries to SAP in real time.
- **Notifications:**
 - Automated alerts/reminders for travel, claims, and order cutoffs.
- **Multi-User Android Support:** Scalable app for wide field deployment with role-based features.

Project #1

Project Name	:	Logistics Pro
Client	:	Naga Limited Logistics Division
Database/Environment	:	React, Laravel , MYSQL).
Link	:	www.logisticspro.nagamills.com

Project Description:

Logistics Pro is a comprehensive logistics and fleet management system developed for Naga Limited's Logistics Division. The application streamlines all key logistics operations including vehicle maintenance, driver records, shipment tracking, SAP shipment automation, driver advance processing, and monthly division-wise reporting. The system is designed to ensure efficient management of logistics resources, automate repetitive tasks, and improve financial visibility across the fleet. One of the standout features of the application is trip-wise income and expense tracking, enabling the company to evaluate vehicle performance and profitability on a granular level.

Key Features:

- Vehicle-wise and month-wise performance reports
- Driver database with trip records and payment advances
- Shipment planning with automated SAP data integration
- Vehicle maintenance logs and service tracking
- Automation of major payment processes
- Real-time dashboard for monitoring logistics KPIs
- Trip-wise income vs. expense analysis
- Alerts for renewals (insurance, etc.)

Roles and Responsibilities:

- Collected and analyzed module-specific business requirements from stakeholders.
- Created detailed design documentation, system flow diagrams, and database schema.
- Implemented robust backend logic using Laravel, handling API development and database interactions with MySQL.
- Created and maintained technical specifications and comprehensive test plans.
- Resolved existing bugs and optimized application performance, improving load times and stability.
- Worked on enhancement requests to add new features and streamline user experience.
- Conducted end-user training sessions to ensure smooth adoption of the system.
- Researched and integrated new technologies to improve scalability and maintainability.
- Investigate new technologies.
- Collaborated cross-functionally with project managers, UX designers, QA engineers, and the client's sales team.

Inventive Inteltech Pvt. Ltd
